

**Healthy  
wetlands...**

**...are better than  
flooded cities.**

MORE INFO

# That is why **WET HORIZONS** is

analysing wetland data to update models for wetland management, resulting in improved ecosystem services.

There is extensive data from dried and rewetted wetlands across Europe. WET HORIZONS uses this data to analyse and substantiate the positive effects of wetland rewetting. The consortium, consisting of 14 partners, aims to develop tools, guidelines, and best management practices to support decision-makers, while also enhancing vital wetland knowledge to raise awareness of this urgent issue.
